CHAPTER 4 Congruent Triangles Analyze geometric relationships in order to make and verify conjectures involving triangles. Apply the concept of congruence to justify properties of figures and solve problems. CHAPTER 5 Relationships in Triangles Use a variety of representations to describe geometric relationships and solve problems involving triangles.

with solving triangles using the Law of Sines and Law of Cosines. It is a geometric exploration and ideas learned here will help in the decision-making process for solving triangles.

Activities - Chapter 4 - Trigonometry

So we know that two triangles are congruent if all of their sides are the same-- so side, side, side. We also know they are congruent if we have a side and then an angle between the sides and then another side that is congruent-- so side, angle, side. If we reverse the angles and the sides, we know that's also a congruence postulate.

Congruent Triangles. A polygon made of three line segments forming three angles is known as Triangle. Two triangles are said to be congruent if their sides have the same length and angles have same measure. Thus two triangles can be superimposed side to side and angle to angle. In the above figure, ΔABC and ΔPQR are congruent triangles ...
