An ELISA or enzyme-linked immunosorbent assay, is a method used in the laboratory to aid in the diagnosis of a wide range of diseases. This test is performed on blood or urine and is used for measuring the amount of a particular protein or substance in these bodily fluids, such as infectious agents, allergens , hormones or drugs.

Enzyme-linked immunosorbent assay (ELISA) information | myVMC

Protocol 8: ELISA Protocol using Antibody Pairs Introduction The enzyme linked immunosorbent assay (ELISA) is used for the detection and quantification of proteins typically secreted or released from cells. Immobilizing a target-specific capture antibody onto a high protein binding capacity ELISA plate enables capture of target protein.
