Solution Manual for: Linear Algebra by Gilbert Strang John L. Weatherwax* January 1, 2006 Introduction A Note on Notation In these notes, I use the symbol \Rightarrow to denote the results of elementary elimination matrices used to transform a given matrix into its reduced row echelon form. Thus when looking for the eigenvectors for a matrix like $A = \begin{pmatrix} 0 & 0 & 2 & 0 \\ 1 & 0 & 0 & 0 \end{pmatrix}$

Linear algebra moves steadily to n vectors in m -dimensional space. We still want combinations of the columns (in the column space). We still get m equations to produce b (one for each row). Those equations may or may not have a solution. They always have a least-squares solution. The interplay of columns and rows is the heart of linear

As pointed out in the preface of Gilbert Strang's Introduction to Linear Algebra, the speed of every new supercomputer is tested on the matrix equation $Ax = b$. (In case you're interested, the world speed record of 10^{15} operations per second was set in 2008 by teams at IBM and Los Alamos.)
