Theory construction fundamentally relies on six relationship types, including direct effects, indirect effects, moderated effects, reciprocal effects, spurious effects and unanalyzed relationships. Once specified, each type of effect can be represented mathematically, thereby translating a path diagram into a set of (linear) equations.

In the social sciences, theories are used to explain and predict observed phenomena in the natural world. Theory construction is the research process of building testable scientific theories to explain and predict observed phenomena in the natural world. Conceptual new ideas and meanings of theories are conveyed through carefully chosen definitions and terms.
