It would appear that each research team in the field of unraveling DNA speaks its own language. What makes the comparison with the tower of Babel more apt is that DNAology sounds like another secular religion. Many of the body's ills previously attributed to God are now being attributed to faulty DNA.

In short, the most dramatic achievement to date of the \$3 billion Human Genome Project is the refutation of its own scientific rationale. In 1990, James Watson described the Human Genome Project as “the ultimate description of life”. It will yield, he claimed, the information “that determines if you have life as a fly, a carrot, or a man.”

Unraveling the DNA Myth: The Spurious Foundation of Genetic Engineering. Barry Commoner argues that the central "dogma" of genetic engineering, that DNA alone controls protein synthesis in a one-to-one correspondence between genes and proteins, is highly questionable. If the relationship between DNA and its cellular consequences is not as simple as genetic engineers claim (due to "alternative splicing"), then the result of modifying the genome of plants, animals, or humans is not predictable.
